

GemSperse Pigment Dispersions are standardized for colour disclaimer.

GemSperse Pigment Dispersions are standardised for colour strength and colour shade to very tight tolerances. The colour indication and fastness data that are shown on both the website and in our brochures are for guidance only. It is essential to conduct trials in the users' own systems for precise colour and data.

As Colour is the most important part of our business offer, our dispersions are not standardized on Total Solids content. As such, there may be some variation in solids parameters from batch to batch.
